

ABSTRACT OF THE DISCLOSURE

5 A disc toy for throwing between at least two persons includes a disc
with a panel and a flange. The panel has a top surface, a bottom surface
and a peripheral edge having a substantially circular shape. A flange is
integrally attached to and extends downwardly from the peripheral edge.
A plurality of windows is positioned in the disc for allowing light to pass
through the disc. Each of the windows is positioned at a juncture of the
10 panel and the flange and the peripheral edge. A plurality of light emitters
is provided. Each of a plurality of clip members is attached to the disc at
a juncture of the bottom surface and the flange. Each of the clip members
abuts one of the windows and each is adapted for releasably securing one
of the light emitters in a position adjacent to one of the windows.
